EDUCATION

Georgia Institute of Technology

Degree: Bachelors of Science & Master of Science in Computer Science

Courses: Data Structures and Algorithms, Low-Level Programming, Advanced Algorithms,

Machine Learning, Artificial Intelligence, Computer Networking, Robotics, Discrete Mathematics

Graduation: May 2026

Atlanta, GA

GPA: 4.0 (Faculty Honors)

EXPERIENCE

Incoming Software Engineer Intern at Meta

May 2025 - August 2025

Palantir Technologies

September 2024 - December 2024

Software Engineer Intern

New York City, NY

- Engineered a computer vision system with C++ for automotive seat models, reducing manual inspection time by 30%
- Integrated my vision system into Palantir Foundry using Java for the backend & Typescript for UI, used by 5+ companies
- Cut procurement costs by 15% across 5 suppliers with a Python and Apache Spark system analyzing supplier pricing trends
- Developed a supply chain anomaly detection service that reduced detection latency by 40% using Go, Kafka, & Kubernetes

Capital One

May 2024 - August 2024

Software Engineer Intern

McLean, VA

- Created software used by 5000+ developers to ensure standardization/readability of Capital One enterprise requirements
- Developed text analysis microservices with Python for NLP & LLM text suggestions and C++ for real-time data processing
- Expanded the Architecture Catalog API in Golang to include new API services for text evaluation/correction
- Replaced manual compliance checks with an automated verification system using Go, AWS Batch, SQS, RDS, & Lambda

HexLabs

November 2023 - May 2024

Software Engineer - Technology Director

Atlanta, GA

- Implemented several full-stack applications used by 7000+ hackathon students yearly with Typescript & PostgreSQL
- Developed backend API with Node.js / MongoDB / Express.js, unifying different services under a microservices architecture
- Secured private data backend servers and judging systems for all HexLabs services (16,000+ requests) with Cloudflare

John Deere

May 2023 - August 2023

Software Engineer Intern

Des Moines, IA

- Saved \$200,000 yearly in inventory adjustments by developing a map application to track product movement with Python
- Developed an API used by 300 employees daily to streamline Quality Note creation and integrate with existing systems
- Implemented a Postman-like SAP Testing Application with Node.js (130 weekly users) to query/test my QNote API
- Designed an application that tracks inventory and PFR metrics for large factories with C#, Java, & DynamoDB instances

PROJECTS

Concurrent Poker Simulation & Hand Evaluation | Go, Computer Vision, AWS, Javascript

Dec 2023 - May 2024

- Optimized compute-heavy Monte Carlo poker simulations by parallelizing across 50 goroutines using Golang concurrency
- Deployed AWS EC2 instances with EC2 Auto Scaler backed by load-balancing AWS Lambda for resource management
- Engineered Firebase backend within microservice architecture, integrating Firestore/Auth with D3.js for user analytics
- Developed a React Native app with a card-recognition computer vision model and REST API for backend integration

BinVision - Efficient Waste Classification | React.js, Express.js, Flask, Firebase, Computer Vision

Oct 2023 - Dec 2023

- Won 1st at Hack Georgia Tech and received a research grant due to BinVision's impact on sustainability and recycling efforts
- Developed and hosted a ResNet34 computer vision model with 90% waste classification accuracy on AWS EC2
- Created a full stack React.js application with Firebase integration for real-time, campus-wide trash data analytics

Google & Georgia Tech Research Institute | C++, CUDA, Machine Learning, Quantitative Finance

Dec 2023 - Dec 2024

- Work on Google sponsored project to use Multi-Objective Genetic Programming to automate algorithm creation with C++
- Utilize Genetic Programming to predict mid-point price for high-frequency trading markets using limit order book data
- Improved efficiency of demanding algorithms by 30% by leveraging GPU/CUDA Programming and Supercomputers

Harvard University Research: Deep Learning for Tuberculosis and Pneumonia | [Link to Published Research](#)

SKILLS

Languages: Java, Python, JavaScript/TypeScript, Go, C, C++, C#, Haskell, PHP, HTML/CSS, SQL, R, MATLAB, Rust

Developer Tools: Git, AWS, Jenkins, MySQL, Kubernetes, Docker, .NET, Linux, UNIX, React, Hadoop, Cassandra, Kafka

Concepts: Data Structures & Algorithms, Operating Systems, Shell Scripting, Frontend/Backend Development, Agile, Computer Vision, Full-stack Development, Network Programming, Machine Learning, Trading, Financial Markets, Cloud Computing, DevOps
